

Evidence of the product running

ENTARC is an autonomous venture agent: Gemini performs due diligence and the agent then moves real USDC on Arc with no human in the approval path. This document records the Gemini calls that were made, the decisions they produced, and the on-chain payments that followed. Live app: entarc.xyz/agent-console · Video: youtu.be/J1k3T85fZ-k

GEMINI MODEL AND ENDPOINT

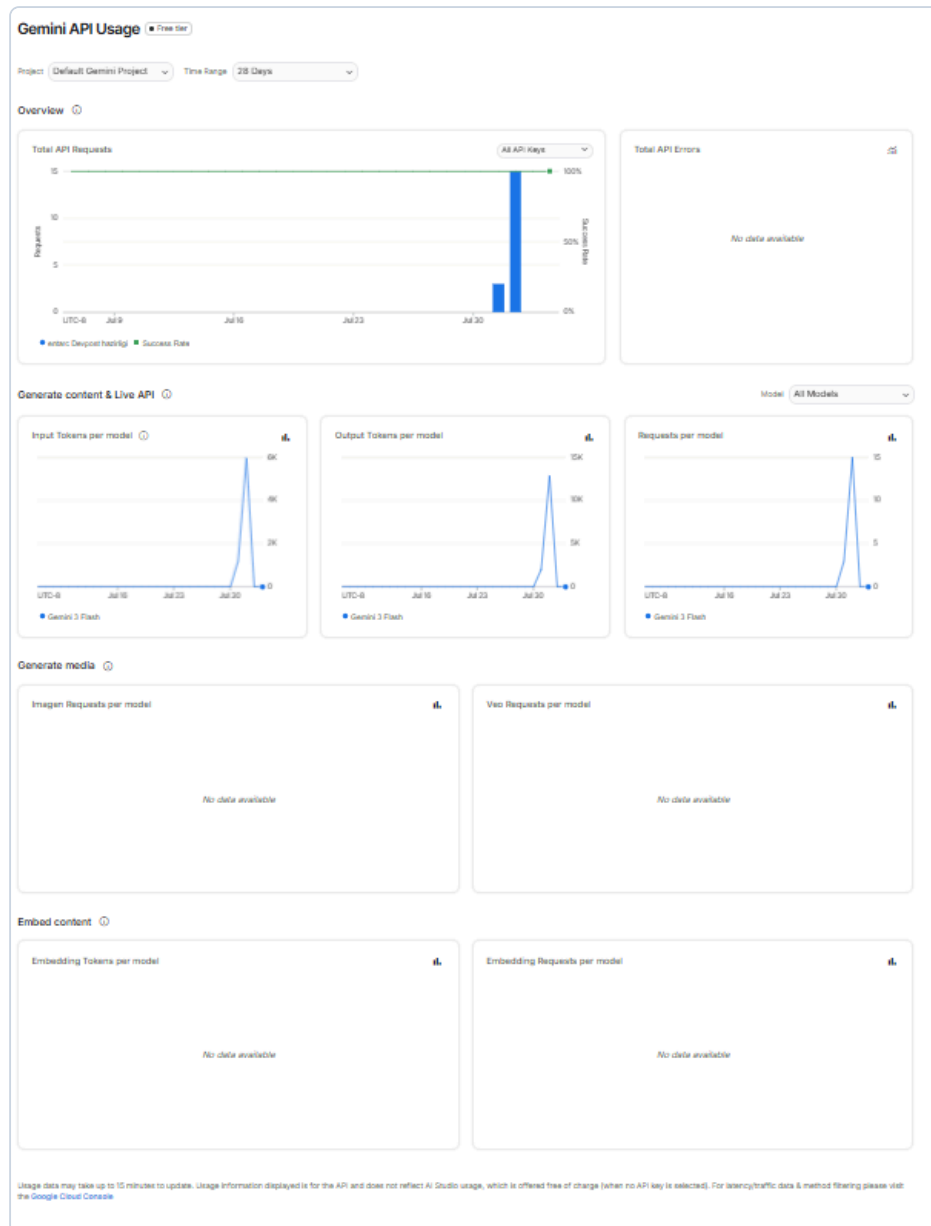

Model	gemini-3-flash-preview
Endpoint	https://generativelanguage.googleapis.com/v1beta/models/gemini-3-flash-preview:generateContent
Configuration	responseMimeType application/json · temperature 0 (deterministic — the score releases money)
Access	Google AI Studio API key, free tier · billed amount for the period: \$0.00
Call sites in the repo	lib/gemini.ts ← app/api/agent/run/route.ts, app/api/projects/analyze/route.ts

GEMINI CALLS EXECUTED (APPLICATION RECORDS)

TIMESTAMP	PROJECT EVALUATED	TRUST SCORE	VERDICT	POLICY OUTCOME
2026-08-01 22:48:34 UTC	Morsu	68/100	BUY	DENIED → no payment
2026-08-01 23:15:13 UTC	MoonVault	0/100	AVOID	DENIED → no payment
2026-08-01 23:15:35 UTC	A NEW ONE	88/100	STRONG_BUY	CLEARED → paid

Each row is a real API call whose structured output was persisted to the application database and then passed to the spending-policy gate (max \$5 per transaction, \$20 rolling 24h, trust score ≥ 70). Two evaluations fell below the threshold and produced **no transaction at all**; one cleared it and released funds. The full machine-readable export is included alongside this file as agent-execution-log.json.

GOOGLE AI STUDIO — GEMINI API USAGE, 28-DAY WINDOW

Google's own observability dashboard for the API key used by ENTARC, exported on 3 August 2026. It confirms the **Free Tier** badge (top left), traffic against **Gemini 3 Flash** concentrated on 1–2 August 2026 when the agent's evaluations ran, a **100% success rate** with the **Total API Errors** panel reporting no data, and roughly **6K input / 15K output tokens** across the period. No Imagen, Veo or embedding usage — the only model in the decision path is Gemini.

Why there is no paid Google Cloud invoice. The key is a Google AI Studio free-tier key, marked "Free Tier" in the dashboard above, so the billed amount for the competition period is **\$0.00** and no monthly Cloud invoice is generated. This dashboard is submitted in its place, as the competition rules allow for free-tier usage.

PAYMENTS EXECUTED AUTONOMOUSLY BY THE AGENT

Settlement runs on Arc Testnet (chain 5042002), where USDC is the native token. Every transfer below was initiated by the agent itself after its own Gemini verdict — no human approved a payment.

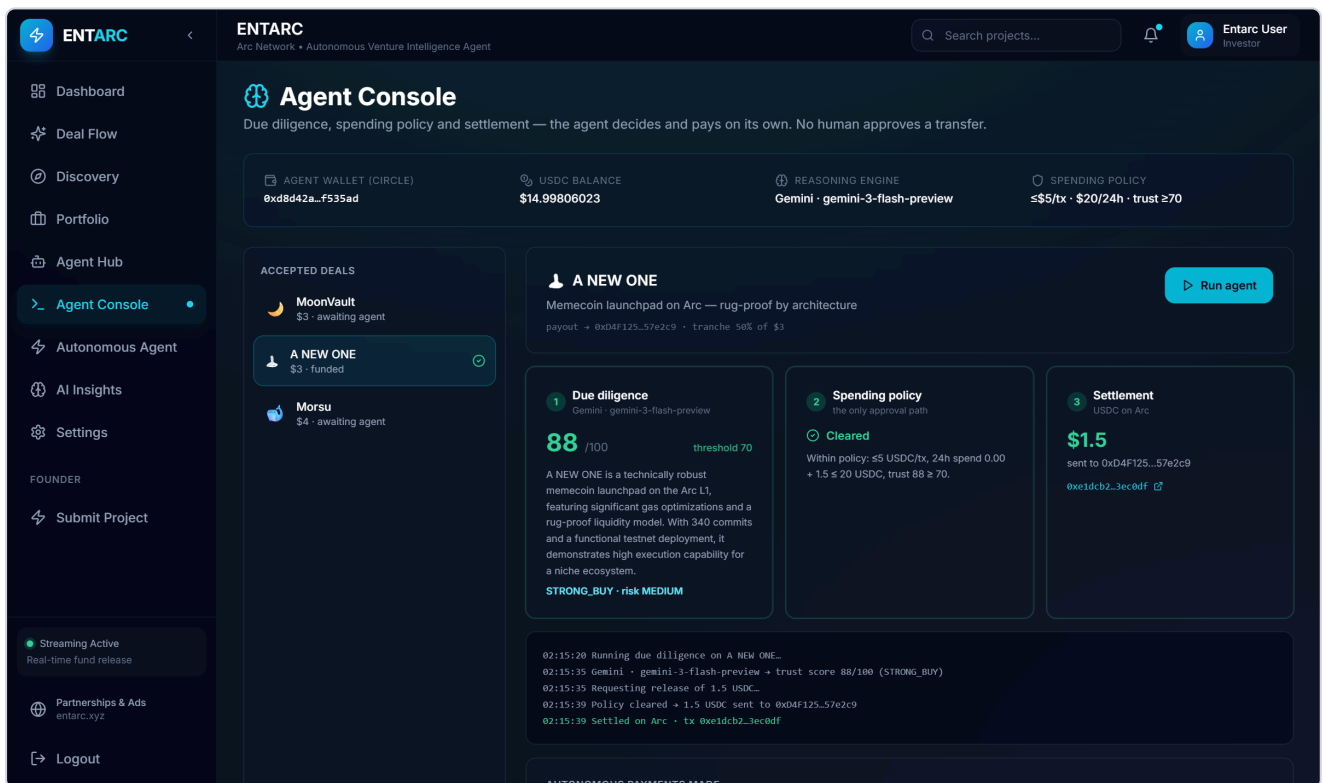

DATE	PROJECT	MILESTONE	AMOUNT	TRANSACTION
2 Aug 2026	A NEW ONE	1 — Mainnet launch	1.50 USDC	0xe1dcb261070726772e92a0fac76f6525a827c7aa9d6586a9b57c099aca3ec0df
2 Aug 2026	A NEW ONE	2 — Fiat onboarding	0.90 USDC	0x990ed73e3ee634c6ac8ad2c44ce5e802bed8006cc861db1cfdb89282b4166389

Agent wallet (Circle developer-controlled): 0xd8d42a355fe806545490758cf76e9c4b6ff535ad

Verify: testnet.arcscan.app/address/0xd8d4...35ad

Transaction 1 confirmed in 0.51 s for a fee of \$0.0008. Funds are testnet USDC from Circle's public faucet and carry no monetary value.

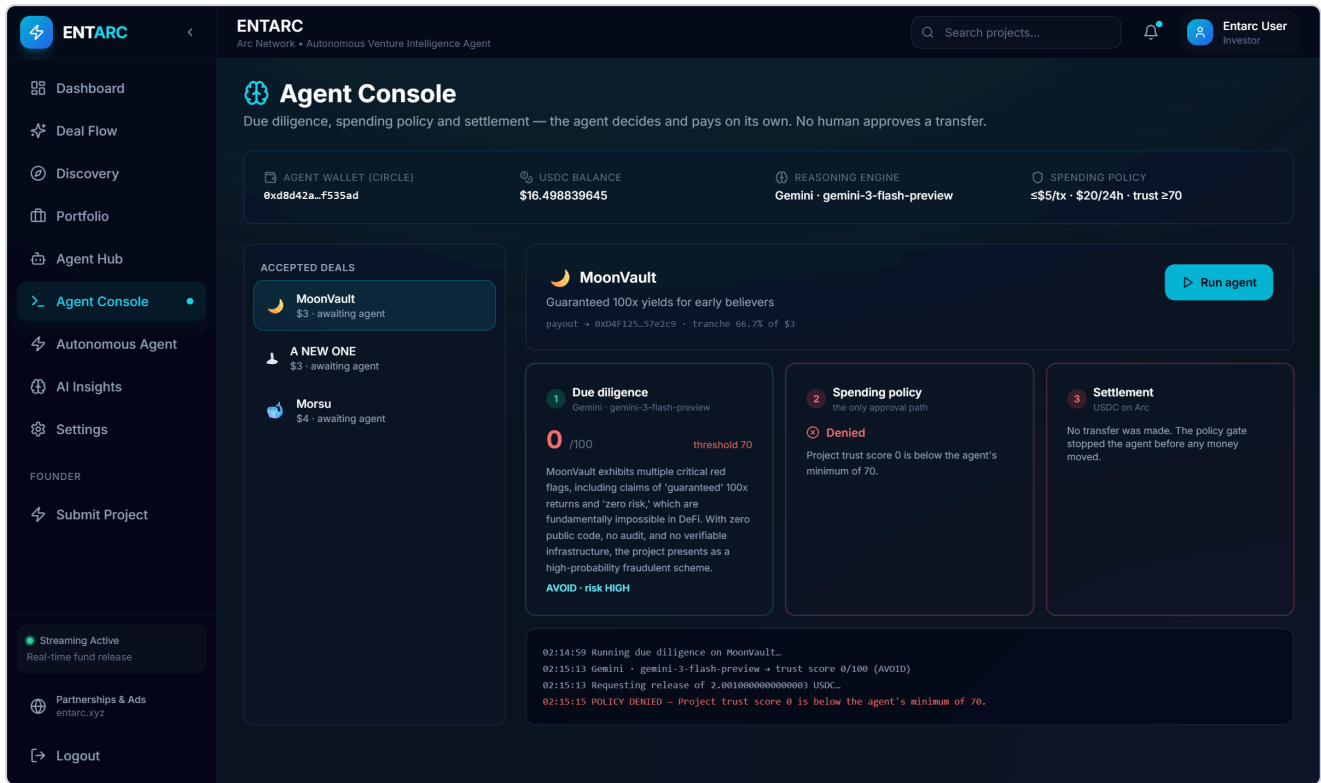

CONSOLE OUTPUT FROM THE FUNDED RUN

The screenshot displays the ENTARC Agent Console interface. The top navigation bar includes the ENTARC logo, a search bar, and a user profile. The left sidebar lists various dashboard sections, with 'Agent Console' currently selected. The main content area is titled 'Agent Console' and describes the agent's autonomous decision-making process. It features a summary of key metrics: Agent Wallet (Circle), USDC Balance (\$14.99806023), Reasoning Engine (Gemini - gemini-3-flash-preview), and Spending Policy (≤\$5/tx, \$20/24h, trust ≥70). Below this, the 'ACCEPTED DEALS' section lists 'A NEW ONE' as a funded deal. The 'A NEW ONE' section provides details about the Memecoin launchpad and includes a 'Run agent' button. The console also displays a progress bar for the 'A NEW ONE' deal, showing a score of 88/100 (STRONG_BUY) and a risk level of MEDIUM. The 'Settlement' section shows a cleared policy and a settlement amount of \$1.5 USDC. The bottom section shows a log of the agent's actions, including due diligence, policy clearing, and settlement.

Gemini scores **A NEW ONE** at **88/100 (STRONG_BUY)**; the policy gate clears the release and the agent sends **1.5 USDC**. The log pane shows the sequence: due diligence → score → policy verdict → settlement hash.

THE AGENT REFUSING TO PAY

The screenshot shows the ENTARC Agent Console interface. The left sidebar contains navigation links: Dashboard, Deal Flow, Discovery, Portfolio, Agent Hub, Agent Console (selected), Autonomous Agent, AI Insights, Settings, FOUNDER, Submit Project, Streaming Active (Real-time fund release), Partnerships & Ads (entarc.xyz), and Logout.

The main content area is titled "Agent Console" and includes a sub-header: "Due diligence, spending policy and settlement — the agent decides and pays on its own. No human approves a transfer." Below this, there are four status cards: AGENT WALLET (CIRCLE) with address 0xd8d42a...f535ad, USDC BALANCE of \$16.498839645, REASONING ENGINE Gemini · gemini-3-flash-preview, and SPENDING POLICY of ≤\$5/tx · \$20/24h · trust ≥70.

The "ACCEPTED DEALS" section lists three deals: MoonVault (\$3 - awaiting agent), A NEW ONE (\$3 - awaiting agent), and Morsu (\$4 - awaiting agent). The MoonVault deal is expanded, showing a "Guaranteed 100x yields for early believers" payout to 0xd4f125...57e2c9 for a 66.7% tranche of \$3. A "Run agent" button is present.

The transaction details for MoonVault are shown in three columns:

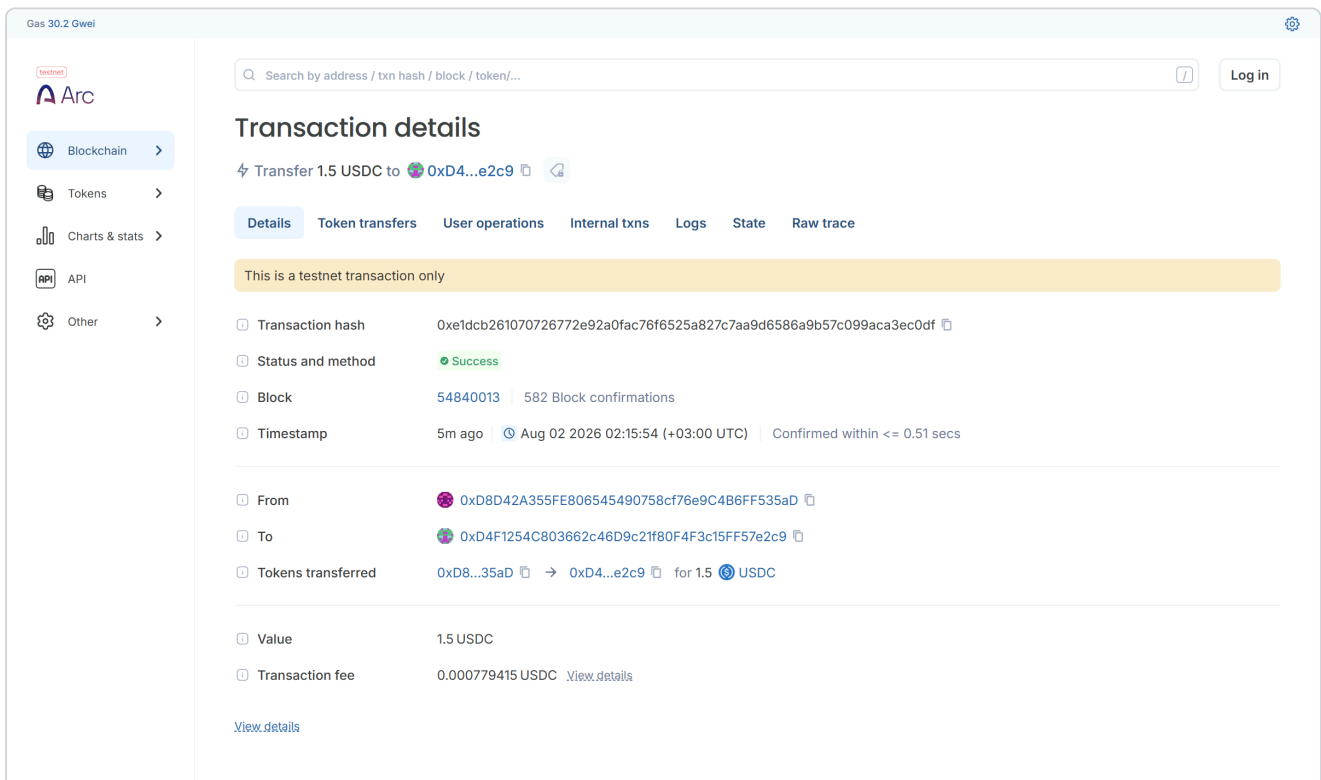

- 1 Due diligence:** Gemini · gemini-3-flash-preview. Score: 0/100 (threshold 70). Reason: "MoonVault exhibits multiple critical red flags, including claims of 'guaranteed' 100x returns and 'zero risk,' which are fundamentally impossible in DeFi. With zero public code, no audit, and no verifiable infrastructure, the project presents as a high-probability fraudulent scheme. AVOID · risk HIGH".
- 2 Spending policy:** the only approval path. Status: Denied. Reason: "Project trust score 0 is below the agent's minimum of 70".
- 3 Settlement:** USDC on Arc. Reason: "No transfer was made. The policy gate stopped the agent before any money moved".

A log at the bottom shows the execution timeline:

- 02:14:59 Running due diligence on MoonVault...
- 02:15:13 Gemini · gemini-3-flash-preview + trust score 0/100 (AVOID)
- 02:15:13 Requesting release of 2.001000000000000003 USDC.
- 02:15:15 POLICY DENIED — Project trust score 0 is below the agent's minimum of 70.

MoonVault — "guaranteed 100x yields", anonymous team, no public code — scores **0/100**; Gemini calls it a high-probability fraudulent scheme. The spending policy denies the release and **no transaction is created**. The guardrails are enforced in code, not in prose.

INDEPENDENT ON-CHAIN VERIFICATION

The screenshot shows the Arc Blockchain Explorer interface. The left sidebar contains navigation links: Blockchain (selected), Tokens, Charts & stats, API, and Other. The main content area is titled "Transaction details" and shows a "Transfer 1.5 USDC to 0xD4...e2c9".

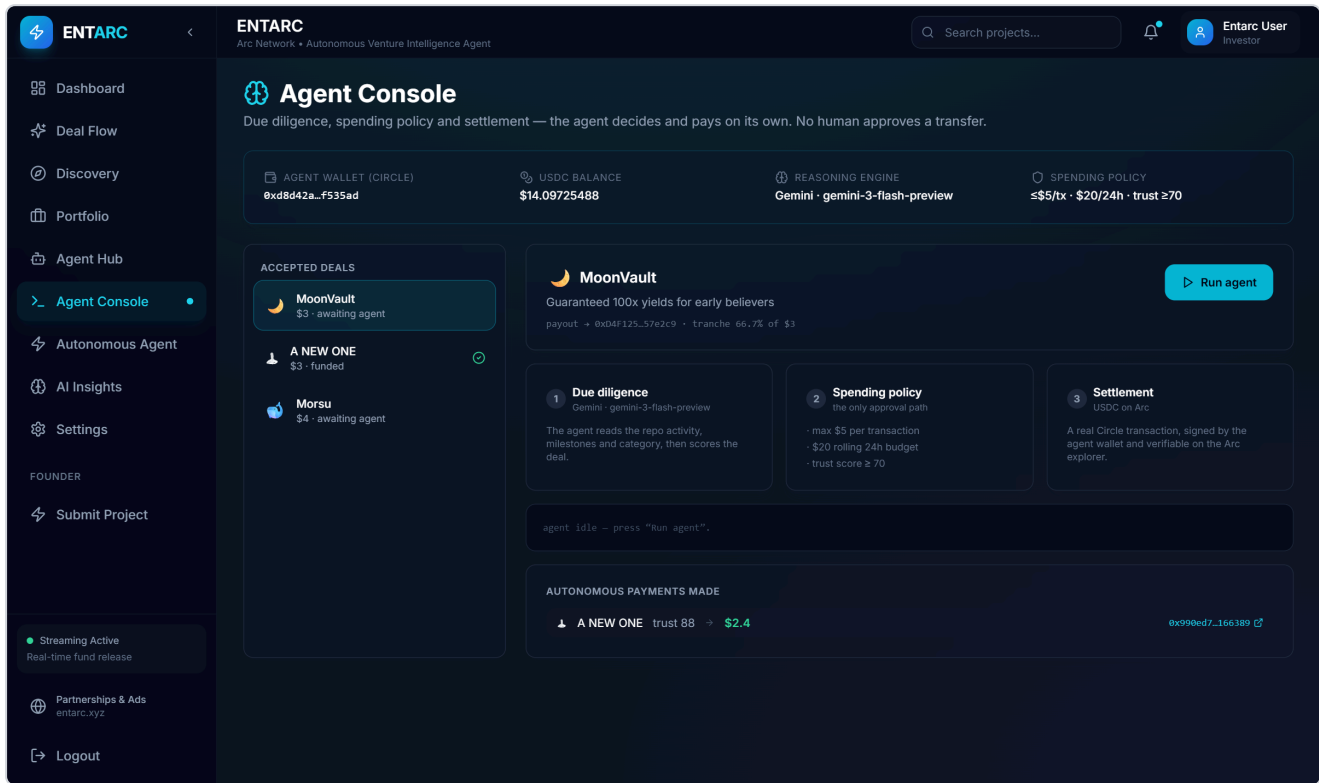

The transaction details are as follows:

- Transaction hash:** 0xe1dcb261070726772e92a0fac76f6525a827c7aa9d6586a9b57c099aca3ec0df
- Status and method:** Success
- Block:** 54840013 | 582 Block confirmations
- Timestamp:** 5m ago | Aug 02 2026 02:15:54 (+03:00 UTC) | Confirmed within ≤ 0.51 secs
- From:** 0xD8D42A355FE806545490758cf76e9C4B6FF535aD
- To:** 0xD4F1254C803662c46D9c21f80F4F3c15FF57e2c9
- Tokens transferred:** 0xD8...35aD → 0xD4...e2c9 for 1.5 USDC
- Value:** 1.5 USDC
- Transaction fee:** 0.000779415 USDC (View details)

A note at the top of the details section states: "This is a testnet transaction only".

The funded transaction on the public Arc explorer: **1.5 USDC** from the agent wallet to the founder's address, **confirmed in 0.51 seconds**, fee **\$0.0008**

MILESTONE TRANCHEs WITH THEIR HASHES

Funding is released milestone by milestone — **\$1.50** then **\$0.90** — each tranche its own transaction, each written back to the deal record (proposal FUNDED, milestone RELEASED, hash stored).

BILLING NOTE

All Google usage for this project was on the **Gemini API free tier via Google AI Studio**, so the billed amount for the competition period is **\$0.00** and no paid Google Cloud invoice exists. Infrastructure cost was likewise \$0: Circle's developer sandbox for the agent wallet and Arc Testnet for settlement, where the agent's own transaction fees totalled roughly \$0.0016 in valueless testnet USDC. The only cost incurred during the period was \$240 of AI development tooling, reported in the attached profit and loss statement.

WHAT IS REPRODUCIBLE

Public repository	github.com/izzetcakmak/ENTARC
Policy engine	<code>nextjs_space/lib/agent-policy.ts</code> — the agent's only approval path
Payment layer	<code>nextjs_space/lib/circle-client.ts</code> — Circle transfer + polling to finality
Gemini layer	<code>nextjs_space/lib/gemini.ts</code>
Run it	See "Run it yourself" in the repository README
